# HARI PRASATH J

*Penetration Tester | VAPT & Vulnerability Management Analyst — Web & Mobile Application Security*

Chennai, Tamil Nadu, India | +91 6374839323 | hariprasathj1705@gmail.com

## PROFESSIONAL SUMMARY

Cyber Security professional with 3.5+ years of IT and security experience across Vulnerability Assessment and Penetration Testing (VAPT), Vulnerability Management, and Security Operations for web and mobile applications. Hands-on with Burp Suite, OWASP ZAP, SQLmap, Nessus, Nmap, Metasploit, and MobSF for identifying, validating, and reporting vulnerabilities using OWASP Top 10 / MASVS methodology. Experienced in enterprise vulnerability scanning and remediation using Qualys, Tenable, and Rapid7, including result review, risk prioritization, and remediation tracking. Skilled in Ansible automation for patch deployment, server hardening, and configuration management across Linux and Windows environments, and in managing findings through Jira following ITIL-aligned Incident, Change, and Problem workflows. Background in SIEM monitoring and threat detection supports both offensive and defensive security work.

## KEY SKILLS

- Web App VAPT: Burp Suite (Pro), OWASP ZAP, SQLmap, Nikto, Acunetix, Postman (API Testing)
- Mobile App VAPT: MobSF, APKTool, JADX, Frida, Drozer, ADB, Genymotion
- Vulnerability Management: Qualys, Tenable (Nessus), Rapid7 (InsightVM) — scanning, result review, risk prioritization, and remediation tracking
- Network & Infra: Nmap, Nessus, Metasploit, Wireshark, Kali Linux, Hydra, John the Ripper, Hashcat
- Automation & Remediation: Ansible (playbook development for patch deployment, server hardening, and configuration management), Python, PowerShell
- Methodologies & Process: OWASP Top 10, OWASP MASVS / MSTG, SAST & DAST, MITRE ATT&CK Framework, Cyber Kill Chain, CVSS Scoring & Risk Rating, ITIL (Incident, Change, Problem Management)
- Other: SIEM – Splunk & Wazuh, TCP/IP & OSI Model, Active Directory Security, REST API Security Testing, VAPT Reporting, Jira, Git / Bitbucket

## EXPERIENCE

**Application Security Tester, Primus Global Technologies, Chennai** **Sept 2026 – Present**

- Perform application security testing for Tata Electronics' web applications, identifying vulnerabilities against OWASP Top 10 before production release.
- Execute manual and tool-assisted security testing, validate findings to remove false positives, and document them with risk ratings and remediation guidance.
- Test authentication, authorization, and session management controls to uncover access control and logic flaws.
- Work with the client's development and QA teams to explain findings, support fixes, and re-test to confirm closure.
- Track vulnerabilities and remediation status through to closure and prepare clear security testing reports.

**Security Analyst – VAPT — CREK ODR LLP, Chennai** **Apr 2025 – May 2026**

- Performed secure code reviews and web application vulnerability assessments, identifying security flaws before production deployment.
- Ran vulnerability scans using Qualys, Tenable, and Rapid7, reviewed and prioritized findings by risk and business impact, and tracked remediation to closure.
- Wrote and maintained Ansible playbooks for patch deployment, server hardening, and configuration management across Linux and Windows systems.
- Investigated application logs and abnormal behavior to detect potential exploitation attempts.
- Tested and hardened authentication, authorization, and session management controls against OWASP Top 10 vulnerabilities.
- Tracked vulnerabilities, risk ratings, and remediation status in Jira following ITIL-aligned Incident and Change management workflows.
- Collaborated with development and QA teams to validate fixes and ensure secure software delivery.

**Process Associate — Genpact India Pvt Ltd, Madurai** **Aug 2024 – Oct 2024**

- Handled non-voice process operations for an insurance domain process; transitioned back to a dedicated VAPT / cybersecurity role shortly after.

**Security Analyst — NPai Pvt Ltd, Madurai** **Jul 2022 – Jul 2024**

- Performed security testing and vulnerability assessments on web and mobile features serving 20,000+ customers and 500+ vendors.
- Used Qualys for periodic vulnerability scanning and supported patch management and remediation planning with Ansible playbooks.
- Reviewed and tested authentication, authorization, and role-based access controls across multiple user roles.
- Developed Python automation scripts for vulnerability reporting and security monitoring.
- Logged and tracked incidents and vulnerabilities in Jira, following Incident and Problem management processes.
- Conducted security-focused code reviews to identify and remediate vulnerabilities prior to release.

## CORE RESPONSIBILITIES (VAPT & VULNERABILITY MANAGEMENT)

- Perform web application VAPT using Burp Suite, OWASP ZAP, SQLmap, and Nikto against OWASP Top 10 vulnerabilities.
- Conduct mobile application security testing (Android/iOS) using MobSF, APKTool, JADX, Frida, and Drozer per OWASP MASVS.
- Run enterprise vulnerability scans with Qualys, Tenable, and Rapid7; review, prioritize, and track findings through remediation.
- Automate patch deployment, server hardening, and configuration management using Ansible across Linux and Windows environments.
- Identify, ethically exploit, and document vulnerabilities; map findings to MITRE ATT&CK techniques and assign CVSS risk ratings.
- Conduct network-level penetration testing and packet analysis using Nmap, Nessus, Metasploit, and Wireshark.
- Manage vulnerability and incident tickets in Jira following ITIL-aligned Incident, Change, and Problem management processes.
- Produce VAPT and vulnerability management reports using Python, SQL, and Excel, summarizing findings, risk ratings, and remediation guidance.

## CERTIFICATIONS

- TryHackMe – Pre Security
- Master Diploma – Cyber Security & Ethical Hacking, BIA Institute

## EDUCATION

**Master Diploma — Cyber Security & Ethical Hacking, 2026**
BIA Institute, Chennai

**B.Sc — Computer Science, 2022**
Vivekananda College, Madurai
